

Energy Audit
Case study:
Construction Group

Background

Our client is one of the UK's largest independent construction and building materials groups, operating dozens of sites throughout the country.

PCMG were tasked with reviewing the electricity charges for over 40 sites, looking back over six years of charges on their invoices with a view to identifying any instances of overcharge in order to recover funds that would hopefully also result in ongoing cost reduction.

While reviewing the bill data, PCMG identified that the client were not receiving the full discounts that they should have been across a number of their locations.

PCMG carried out a comprehensive analysis of all regulated non commodity charges and identified a number of areas where the discounts could be applied retrospectively.

PCMG dealt with all of the identification, communication with DNO's and suppliers, application of correct discounts on behalf of the client and working with their supplier to get all the changes applied and the client's account rebilled.

PCMG managed to secure a refund of over **£170k** and over **£48k** in ongoing savings.

Total Refunds: **£170,000** Savings: **£48,000**
