

Energy Audit
Case study:
Large Spring Manufacturer

Background

The client is a manufacturer of coil and suspension springs, using the most advanced technologies to produce springs of the highest quality.

Their primary manufacturing site, had an energy spend of approximately £1m per annum for their electricity and gas.

The client engaged with PCMG to perform a complete energy and water audit, looking over invoices for their electricity, gas and water and to identify any ongoing cost reduction opportunities.

The client provided PCMG with a selection of invoices covering six years.

These were supplemented with data obtained directly from the client's suppliers and information sourced from industry third parties such as their distribution and metering companies.

Analysis uncovered incorrect levels of discounts which had been charged historically. These findings were compiled into a detailed report.

Once the client had reviewed the findings and agreed to proceed, PCMG initiated the cost recovery process with their suppliers, providing detailed evidence packs.

All refunds across electricity, gas and water amounted to **£132,000** — a huge saving on their previous annual spend.

Total Recovered Across Electricity, Gas and Water: **£132,000**
