

Energy Audit
Case study:
Metalwork contractor

Background

The client is one of the largest sheet metalwork sub-contractors in the UK.

Being an energy-intensive manufacturer, they have an overall annual energy spend of over £550k.

The client signed a contract with PCMG to perform a retrospective audit on their energy.

We got to work quickly and identified incorrect voltage charges and were able to correct prior to the clients energy contract being renewed, thus enabling them to benefit from the savings straight away.

If not completed in time, we would have had to wait three years until the end of their new contract.

PCMG also identified other errors in distribution charges and incorrectly applied discounts.

Within three weeks we managed to secure a refund of £74k – 13% of their yearly energy spend – plus ongoing annual savings of £18k. Refunds were paid back to the client within two months of PCMG's initial report.

Refund: **£74,000**

Ongoing Annual Saving: **£18,000**
